DETAILED ACTION

1. This application has been examined. Claims 1-10 are pending.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Ko (Figures 1 and 3B). Also note the plurality of flow paths (outlets) 44 are valved by the rotary plug 50 from a reservoir in fluid communication with inlet 43. The valve position determines which of the plurality of outlets are in fluid communication with inlet 43. A spring, disposed in the peripheral recess 721 of the plug biases friction detent 723 (column 3, lines 1+). This detent is clearly shown in Figure 3B (claim 3). Coacting threaded portions of the valve prevent rotation of respective valve elements. A knob 74 (Figure 2) is clearly shown attached to the valve stem 53.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. In particular, note the biased valve head element engaging a portion of the valve housing to reduce valve leakage shown in Figure 6 (column 5, lines 55+) of Thomas et al.
